TryHackMe: Ranked in the **Top 1% Globally** | Offensive Security · Penetration Testing · Network Defense

CAREER OBJECTIVE

Cybersecurity student with hands-on experience building production-grade security tooling. Developed **ALERTIX**, a multi-agent SIEM platform with 98% TTD reduction, and **ThreatSphere**, a malware sandbox for ransomware behavioral analysis. Combines offensive security depth (top 1% on TryHackMe) with defensive engineering across log ingestion, threat intelligence, and API security. Seeking to apply SIEM engineering, penetration testing, and automation skills to an impactful security team.

EDUCATION

Hemwati Nandan Bahuguna Central University
B.Sc. in Computer Science

Srinagar Garhwal
Expected Jul 2028

INTERNSHIP

Bharat Space Education Research Centre
Def-Space Intern (Remote)

Dec 2025 – Jan 2026

- Completed a structured 2-month grassroots STEM program spanning AI, robotics, and drone technology modules, each culminating in hands-on project work applying core engineering concepts.
- Built foundational aerospace and automation skills through applied training in sensor systems, autonomous navigation basics, and AI-driven control logic.

Next Gen Software Pvt. Ltd.
Cybersecurity Intern (Remote)

Oct 2023 – Nov 2023

- Conducted vulnerability assessments across live systems and authored incident reports with actionable remediation steps to strengthen organizational security posture.
- Monitored production systems via SIEM dashboards to detect anomalies and intrusion attempts in real time; contributed to drafting formal security policies.

PROJECTS

ALERTIX | *ELK Stack (Elasticsearch, Logstash, Kibana), Python, Shell Scripting* | [GitHub](#)

- Built a cross-platform SIEM using 3 decentralized endpoint agents, achieving a 98% reduction in Time-to-Detect (TTD) and flagging simulated ransomware bursts in under 60 seconds.
- Engineered a real-time Flask ingestion server auto-sorting logs into 12 threat categories, cutting triage overhead by 85% with 100% data reliability via MongoDB/Elasticsearch replication.

ThreatSphere | *Flask, MongoDB, Python, Linux Sandbox* | [GitHub](#)

- Designed an isolated sandbox (VirtualBox/Docker) to safely execute ransomware and monitor file system changes, process creation, and network calls without risk to host systems.
- Built a Flask + MongoDB backend to capture and visualize malware activity logs, exportable as CSV/JSON for analyst reporting and threat intelligence sharing.

TECHNICAL SKILLS

Languages & Scripting: C (Data Structures & Algorithms), Python (Backend & Automation), Bash

SIEM & Logging Infrastructure: Log Ingestion Pipelines, Threat Signature Mapping, File Integrity Monitoring (FIM), MongoDB, Elasticsearch, Kibana

Security Tools & Platforms: Git, TryHackMe, Wireshark, Nmap, Netcat

Operating Systems & Environments: Linux, Windows (PowerShell Scripting)

Networking & Web Security: TCP/IP, Socket Monitoring, HTTP/HTTPS APIs, Flask, CORS Security

ACHIEVEMENTS & CERTIFICATIONS

- **Certified API Security Analyst (CASA)** – APISec University
- **Certified Threat Intelligence Analyst (CTIA)** – EC-Council
- **Fortinet FortiGate 7.6 Operator** – Fortinet
- **Cisco Cyber Threat Management** – Cisco Networking Academy
